

PRINCIPAL ARCHITECT & AI LEAD — INTERVIEW PRESENTATION

A Platform Built to Scale

Reasoning, trade-offs, and open questions

Tim Halmshaw · May 2026

Based on public information and prior conversations with Mark and Laurence. Current state assumptions to be validated on day one.

High Level Summary

THE PROPOSITION

- A smartphone camera measures blood pressure and pulse rate. Micro colour changes in facial skin (remote photoplethysmography) analysed by proprietary AI.
- CE Class IIa EU MDR certified for BP and pulse. Currently in pilot with NHS
- FDA clearance in progress.

WHERE THE VALUE SITS

- The science is proven with six patents secured.
- A data model of 25,000+ paired clinical recordings from 12,500 patients.
- Both systolic and diastolic to clinical grade.
- The value needs to be unlocked, getting this into the hands of 100 million people, not 100 thousand.
- The current solution doesn't scale, this is a platform problem.

THE TECHNICAL CHALLENGE

Parallel improvements required:

- Scale without breaking what's in production today
- Every change traceable for regulators
- Deliver with a small focused team
